

# matterhorn®

THE JACKET MAKER

JACKET COLLECTION  
2020-2021

# Does your company stand out!

The Matterhorn collection offers outdoor apparel for every occasion, both work and leisure, in first class materials and classic timeless designs. Our clothing is thoughtfully created to enhance, with colour and print, the image of your company.

It is important to create an identity that represents your company. Co-workers are an important extension of your logotype, as they are the link between the company and your clients. Unified clothing shows an obvious connection of the people working together. A jacket is a popular and very effective way to strengthen the motivation amongst co-workers at the workplace and at the same time show your company's logotype/message.

# GIVE PLASTIC A NEW LIFE

Our recycled weather protection collection

## Recycled Polyester

Recycled polyester reduces our consumption of newly produced petroleum based products. Our recycled polyester is made from PET bottles and waste material. Cloth made from recycled polyester has a reduced effect on the environment by using less water, electricity and crude oil. Management of discarded clothing and other polyester based material is reduced which is positive for the planet.

Polyester is an important fibre in our products. It allows us to create light fabrics that dry quickly and can be used in all manner of diverse clothing.

Recycled polyester has been around since the early '90's and recent developments have allowed it to be more generally accessible and prices have begun to be comparable to its more conventional counterparts. Using it reduces our dependence on petroleum as a raw material as well as reducing greenhouse gas emissions. Another plus is that we use material, that would otherwise be burned or end up in a land-fill. We reduce waste at the same time as we reduce usage of crude oil.

## Recycled Nylon

Our recycled nylon is produced from industrial waste and discarded nylon-based products.

Nylon is one of the strongest threads that we use in our products. When we need a light weight fabric it is important to use nylon for its durability. On top of its ecological friendliness, the recycled nylon fibres are strong, light and sustainable.

Our eventual goal is to cease using conventional nylon, and recycled nylon will allow us to continue creating some of our favourite garments that will live up to our high quality standards. Using as much recycled nylon as possible reduces our dependence on fossil fuels.

Recycled nylon uses less resources (like water, energy and fossil fuels) than manufacturing conventional nylon, but has the same lightness and durability.

By using this material we can reduce the enormous amounts of waste that discarded garments create and, at the same time, reduce the production of greenhouse gases. It also helps to support new recycling streams for nylon products that are no longer viable.

In 2020 we will introduce our first jacket with an outer layer of 100% recycled nylon.

# Shell jackets

A shell jacket's function is to protect you from wind, rain and external weather. It should also integrate with your other layers of clothing by releasing moisture.

## Softshell jackets

Softshell garments are incredibly handy and can be used as both outerwear and as insulation between layers. Stretch material makes them soft and supple, while allowing them to resist snow, wind and the cold.

A Matterhorn softshell has a given place in everyone's wilderness wardrobe.

## TECHNICAL INFORMATION

### A.B.T

A.B.T. Advanced Breathing Technology is a breathable material that is both light and flexible as well as wind and water proof. .

### SOFTSHELL

Matterhorn softshelljackets are made of three layers. A membrane that is laminated between the outerfabric and the innerfleece. This allows the garment to be wind proof whilst allowing water vapour from condensation and perspiration to escape. It keeps you warm and dry in virtually any kind of weather.

This symbol appears to indicate which products are available in women's sizes or are purely aimed at women.

Nano-Tex is a coating that makes a material resistant to water, spills and stains. This spill-resistant function keeps the garment fresh and, if you do get a stain, easier to clean. All this with no compromise when it comes to comfort.

### TAPED SEAMS

Our seams are taped from the inside with a thin band to prevent water penetration. An important detail in a water proof garment

### PRODUCT CARE

Your garment will give you years of service if you follow the care instructions on the label. Always wash jackets separately having first removed the fleece/softshell lining. Always use a mild washing powder at the correct temperature shown in the garment. Our waterproof clothing should be re-impregnated with a substance designed for "breathable" materials available in sports shops. Fleece/softshell clothing should be allowed to 'drip-dry'.

### ZIPPER PULERS

Extra zipper pullers in 7 different colors is available when you buy a jacket from Matterhorn.

### NOTE

The pictures in the catalogue and the actual products may differ slightly in colour due to the methods of photography and printing used. The scenic pictures may also differ somewhat from the pictures of the products as a result of varying light conditions.

At [matterhorn.se](http://matterhorn.se) we aim to provide you with all facts about matterhorn and our products. Here you can find online catalogues and a database with all our images and spec sheets pdf's for easy downloads.

## PRODUCT INDEX

Code	Description	Page

# CSR

At Matterhorn we pride ourselves in selling products that are manufactured under acceptable working conditions.

We do not own or run our own factories, our products are made by manufacturers, largely in China, with whom we have had a long-running working relationship. We insist that our partners commit to following our ethical code.

In many countries where manufacturing costs are low, there is a risk that sustainability and ethical sourcing of raw material take a back-seat. Not so for us! We consider these questions to be of the highest priority.

For Matterhorn it is important to contribute to sustainable development by taking social and environmental responsibility, which demands high standards from all of our suppliers!

Matterhorn is a member of amfori BSCI (Business Social Compliance Initiative), a European initiative that unites hundreds of companies in a common behavioural code.

Amfori BSCI's primary mission is to support this network in their goal to create sustainable and ethical supply-chains.

As a member of BSCI, Matterhorn is committed to following BSCI's code of conduct.

All BSCI members work together to ensure that the demands and improvements are met by suppliers who, in their turn, also follow BSCI's code of conduct.

As a customer, you will not find a jacket or garment with a BSCI logo, however, all companies that work to BSCI's standards are pledged to upholding all the network's commitments.

Read more about the Matterhorn Code of Conduct at [www.matterhorn.se](http://www.matterhorn.se)

## Environment

For us at Matterhorn quality is more than just a good jacket or fleece. Quality for us is as much about the team that makes our products working under safe, fair, legal and humane conditions. It's about continually searching for new environmentally friendly materials, energy-saving production methods and possibilities to improve our world through our daily work!

Everything we do impacts nature around us and everyone who lives there. We are convinced that we can continue to do what we are doing today, but in an improved way. We have many exciting opportunities, huge challenges and unending work ahead of us. For example, in 2015/16 we started to impregnate our garments with PFC-free waterproofing. And now we are launching our fleece made from totally recycled materials including, amongst other things, old PET bottles.

The OEKO-TEX® mark is your guarantee that the garment does not contain dangerous substances. OEKO-TEX® follows the restriction guidelines for ph-value, pesticide and heavy-metal levels.

At Matterhorn we have a selection of garments with the OEKO-TEX® mark

The Responsible Down Standard ensures that down and feathers come from ducks and geese where no live plucking is conducted. The standard follows the chain of custody from farm to product, so consumers can be confident that the down and feathers in the products they choose are truly RDS. The Responsible Down Standard is an independent, voluntary global standard, which means that companies can choose to certify their products to the RDS, even if there is no legislation requiring them to do so. The standard recognizes the best practices in animal welfare, and excludes those that violate the animal's well being.

Bionic-Finish Eco is a water-resistant coating that we have been using on our shell and wet-weather clothing since the autumn of 2016.

It is fluoro-carbon, formaldehyd and parafin free, substances that are used in more conventional production.

Fluoro-carbons have revealed themselves to be disruptive to hormone production. Bionic-Finish Eco is totally free from these substances.

More information is available here: <http://www.rudolf.de/en/technology/bionic-finish-eco/>

The Global Recycled Standard (GRS) addresses input material verification, chain of custody, environmental principles, social requirements, and labelling for textile products made from recycled materials. It is a full-product standard for recycled material content that balances rigor and practicality for the industry and end consumers.

Trade with purpose

At amfori we believe in a world where all trade delivers social, environmental and economic benefits for everyone. We call this Trade with Purpose.

As the leading global business association for open and sustainable trade, we bring together over 2,000 retailers, importers, brands and national associations representing a combined turnover of more than one trillion euros. Matterhorn have been a part of the organisations since 2015.

At Matterhorn we make sure that, even our suppliers meet the legislation applying to the chemicals and substances that the European Parliament set as a standard according to 190/2006/REACH Appendix XVII.

REACH prohibits and regulates the usage of certain substances as well as reducing the quantity of chemicals that can be dangerous to our health and the environment.
